Our Specialty

Thermoplastic rubber feet. We injection mold them in over thirty sizes. We mold other materials but thermoplastic rubber has become our first choice. We stock them in black and medium grey and offer optional colors and hardness. If you don't find what you need from our existing product line, we can use your design or we will custom design one for you.

Along with our other products we keep over two million pieces of inventory to provide off-the-shelf delivery. We will be happy to send you free samples to test or compare. We believe you will find our products to be an excellent balance of quality, performance and price.
